GIS Data Quality Control

Bermuda and Belize Data Conversion Quality Control

DMS was hired to provide quality control services for Stewart Geo Technologies, a professional services organization dedicated to providing mapping and land registry services. DMS was tasked to quality-check and report on the following GIS data for the countries, Bermuda and Belize:

- Parcel boundary lines for closure (No polylines)
- Parcel IDs for completeness (Distributed throughout the parishes)
- Placement of parcels to digital ortho-photos
- Street centerline attributes for completeness
- Road centerline placement against digital ortho-photos

Public road polygons (tags and placement)

-

Coastline fit to parcels

-

Provide a count on the number of parcels with each data layer

-

Coastline fit to parcels

-

Provide a written report on the quality of the Bermuda and Belize parcel data based on the checks performed.
