

School and Daycare Location Verification

DMS was hired to provide verification of school and children/adult daycare facilities throughout the state of Texas that are within a half-mile buffer of Koch's pipelines. Pipeline companies are required by the Railroad Commission to notify these institutions of the presence of their pipelines every two years, so that, in the event of an emergency, proper planning will have been established with first responders. Koch Pipeline requested from DMS an updated master list and

point shapefile of schools and daycare facilities within the half-mile vicinity of their pipelines.
